PROFESSIONAL SUMMARY

Android Engineer with 1.5 years of production-level experience building scalable, high-performance mobile systems. Specialized in Clean Architecture, performance optimization, and platform migrations. Reduced crash rates by 47%, improved startup time by 30%, and led system-level improvements impacting live users. Strong problem-solving ability with solid foundations in Data Structures and Algorithms.

TECHNICAL SKILLS

Languages: Kotlin, Java

Android: Jetpack Compose, MVVM, Clean Architecture, Hilt, Retrofit, Coroutines, Flow, Room, Navigation

Performance: Memory Optimization, ANR Reduction, Crashlytics, Profiling Tools

Architecture: Multi-module Design, SOLID Principles, Gradle Optimization

Backend: REST APIs, Spring Boot, Hibernate, MySQL

Problem Solving: Data Structures, Algorithms, 200+ DSA problems solved

EXPERIENCE

NeoSOFT

Jan 2025 – Present — Pune, India

Associate Software Engineer

- Led Android OS migration (14 → 15) and AGP upgrade (5.2.1 → 8.5.2), resolving critical dependency and runtime issues.
- Reduced crash rate by 47% and improved startup performance by 30% using profiling, memory tuning, and architectural refactoring.
- Implemented 16KB memory page compliance and edge-to-edge UI support aligned with latest Android standards.
- Designed robust backend integrations using Retrofit with structured error handling and retry logic.
- Maintained zero P0 incidents across multiple release cycles, ensuring production stability.

ANUDIP Foundation

May 2024 – Dec 2024

Java Full Stack Trainee

- Developed microservices-based Movie Ticket Booking System using Java 17, Spring Boot, Hibernate, and MySQL.
- Designed REST APIs for booking and payment workflows with modular architecture.

KEY PROJECTS

Unified Multi-Module Android Application (Native Android Application)

- Architected unified Android application consolidating multiple business workflows into a scalable multi-module system.
- Implemented geofencing using device location APIs to validate delivery/pickup authenticity.
- Reduced fake delivery or pickup attempts by 87% through real-time location validation logic.
- Applied Clean Architecture with MVVM and dependency injection using Hilt.

Third-Party Onboarding Platform (React-Based System)

- Rebuilt vendor onboarding system reducing external dependency and improving operational control.
- Deployed across 69% of operational hubs, improving reliability and system transparency.
- Collaborated with mobile and backend teams for seamless end-to-end integration.

EDUCATION

B.Tech in Computer Science

RTC Institute of Technology

2019 – 2023
